Lack of Resilience Index:

The Lack of Resilience Index assesses the susceptibility to impact and the short-term inability to absorb, respond to, and recover from disruptions to a country's normal function.

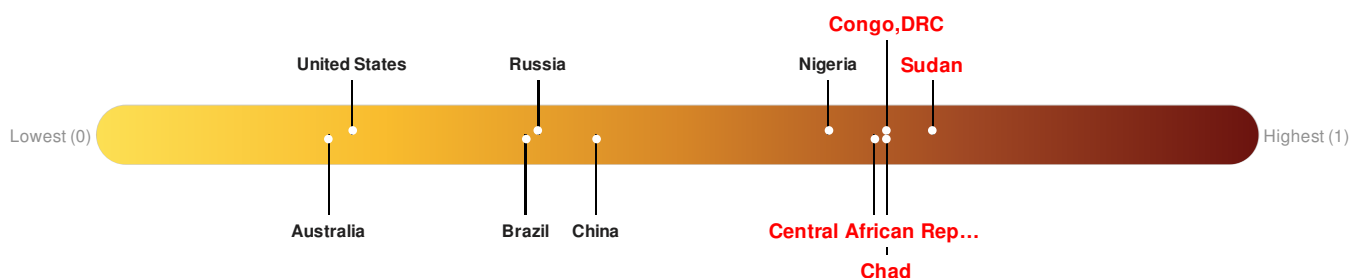

Central African Republic ranks 5 out of 165 countries assessed for Lack of Resilience. Central African Republic is less resilient than 97% of countries assessed. This indicates that Central African Republic has high susceptibility to negative impacts, and is more able to respond to and recover from a disruption to normal function.

Chad ranks 3 out of 165 countries assessed for Lack of Resilience. Chad is less resilient than 99% of countries assessed. This indicates that Chad has high susceptibility to negative impacts, and is more able to respond to and recover from a disruption to normal function.

There was insufficient data to determine the Lack of Resilience Index score for **South Sudan**.

Sudan ranks 2 out of 165 countries assessed for Lack of Resilience. Sudan is less resilient than 99% of countries assessed. This indicates that Sudan has high susceptibility to negative impacts, and is more able to respond to and recover from a disruption to normal function.

Congo, DRC ranks 3 out of 165 countries assessed for Lack of Resilience. Congo, DRC is less resilient than 99% of countries assessed. This indicates that Congo, DRC has high susceptibility to negative impacts, and is more able to respond to and recover from a disruption to normal function.

Regional Overview

Risk & Vulnerability

Additional information and analysis is available for Disaster Management Professionals. If you are a Disaster Management Professional and would like to apply for access, please [register here](#). Validation of registration information may take 24-48 hours.

Multi Hazard Risk Index:

The Multi Hazard Risk index assesses the likelihood of losses or disruptions to a country's normal function due to the interaction between exposure to multiple hazards (tropical cyclone winds, earthquake, flood and tsunamis), socioeconomic vulnerability, and coping capacity

Multi-Hazard Exposure **Central African Republic** ranks **12** out of **165** countries assessed for Multi Hazard Risk. Central African Republic has a Multi Hazard Risk higher than 93% of countries assessed. This indicates that Central African Republic has more likelihood of loss and/or disruption to normal function if exposed to a hazard.

Multi-Hazard Exposure **Chad** ranks **4** out of **165** countries assessed for Multi Hazard Risk. Chad has a Multi Hazard Risk higher than 98% of countries assessed. This indicates that Chad has more likelihood of loss and/or disruption to normal function if exposed to a hazard.

There was insufficient data to determine the Multi Hazard Risk Index score for **South Sudan**.

Multi-Hazard Exposure **Sudan** ranks **2** out of **165** countries assessed for Multi Hazard Risk. Sudan has a Multi Hazard Risk higher than 99% of countries assessed. This indicates that Sudan has more likelihood of loss and/or disruption to normal function if exposed to a hazard.

Multi-Hazard Exposure **Congo, DRC** ranks **7** out of **165** countries assessed for Multi Hazard Risk. Congo, DRC has a Multi Hazard Risk higher than 96% of countries assessed. This indicates that Congo, DRC has more likelihood of loss and/or disruption to normal function if exposed to a hazard.
