#### Lack of Resilience Index:

The Lack of Resilience Index assesses the susceptibility to impact and the short-term inability to absorb, respond to, and recover from disruptions to a country's normal function.

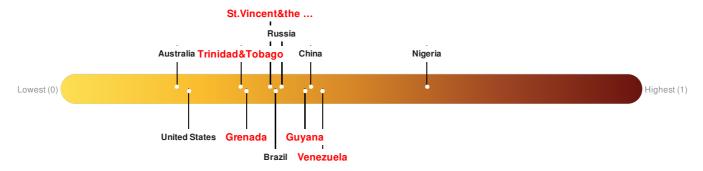

Trinidad & Tobago ranks 122 out of 165 countries assessed for Lack of Resilience. Trinidad & Tobago is less resilient than 27% of countries assessed. This indicates that Trinidad & Tobago has low susceptibility to negative impacts, and is less able to respond to and recover from a disruption to normal function.

Grenada ranks 120 out of 165 countries assessed for Lack of Resilience. Grenada is less resilient than 28% of countries assessed. This indicates that Grenada has low susceptibility to negative impacts, and is less able to respond to and recover from a disruption to normal function.

Guyana ranks 86 out of 165 countries assessed for Lack of Resilience. Guyana is less resilient than 48% of countries assessed. This indicates that Guyana has medium susceptibility to negative impacts, and is less able to respond to and recover from a disruption to normal function.

St. Vincent & the Grenadines ranks 109 out of 165 countries assessed for Lack of Resilience. St. Vincent & the Grenadines is less resilient than 34% of countries assessed. This indicates that St. Vincent & the Grenadines has low susceptibility to negative impacts, and is less able to respond to and recover from a disruption to normal function.

Venezuela ranks 71 out of 165 countries assessed for Lack of Resilience. Venezuela is less resilient than 57% of countries assessed. This indicates that Venezuela has medium susceptibility to negative impacts, and is more able to respond to and recover from a disruption to normal function.

### Risk & Vulnerability

Additional information and analysis is available for Disaster Management Professionals. If you are a Disaster Management Professional and would like to apply for access, please register here. Validation of registration information may take 24-48 hours.

#### Multi Hazard Risk Index:

The Multi Hazard Risk index assesses the likelihood of losses or disruptions to a country's normal function due to the interaction between exposure to multiple hazards (tropical cyclone winds, earthquake, flood and tsunami), socioeconomic vulnerability, and coping capacity

Multi-Hazard Exposure Grenada ranks 121 out of 165 countries assessed for Multi Hazard Risk. Grenada has a Multi Hazard Risk higher than 27% of countries assessed. This indicates that Grenada has less likelihood of loss and/or disruption to normal function if exposed to a hazard.

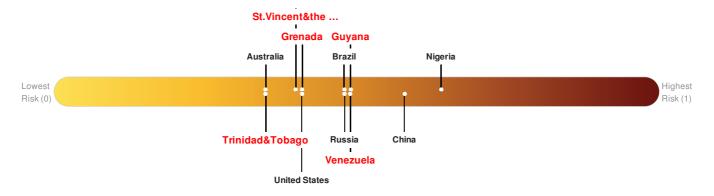

Multi-Hazard Exposure **Guyana** ranks **81** out of **165** countries assessed for Multi Hazard Risk. Guyana has a Multi Hazard Risk higher than 51% of countries assessed. This indicates that Guyana has more likelihood of loss and/or disruption to normal function if exposed to a hazard.

Multi-Hazard Exposure Trinidad & Tobago ranks 142 out of 165 countries assessed for Multi Hazard Risk. Trinidad & Tobago has a Multi Hazard Risk higher than 14% of countries assessed. This indicates that Trinidad & Tobago has less likelihood of loss and/or disruption to normal function if exposed to a hazard.

Multi-Hazard Exposure St. Vincent & the Grenadines ranks 124 out of 165 countries assessed for Multi Hazard Risk. St. Vincent & the Grenadines has a Multi Hazard Risk higher than 25% of countries assessed. This indicates that St. Vincent & the Grenadines has less likelihood of loss and/or disruption to

normal function if exposed to a hazard.

Multi-Hazard Exposure Venezuela ranks 81 out of 165 countries assessed for Multi Hazard Risk. Venezuela has a Multi Hazard Risk higher than 51% of countries assessed. This indicates that Venezuela has more likelihood of loss and/or disruption to normal function if exposed to a hazard.
