Lack of Resilience Index:

The Lack of Resilience Index assesses the susceptibility to impact and the short-term inability to absorb, respond to, and recover from disruptions to a country's normal function.

Belize ranks **111** out of **165** countries assessed for Lack of Resilience. Belize is less resilient than 33% of countries assessed. This indicates that Belize has low susceptibility to negative impacts, and is less able to respond to and recover from a disruption to normal function.

El Salvador ranks **64** out of **165** countries assessed for Lack of Resilience. El Salvador is less resilient than 62% of countries assessed. This indicates that El Salvador has medium susceptibility to negative impacts, and is more able to respond to and recover from a disruption to normal function.

Guatemala ranks **44** out of **165** countries assessed for Lack of Resilience. Guatemala is less resilient than 74% of countries assessed. This indicates that Guatemala has medium susceptibility to negative impacts, and is more able to respond to and recover from a disruption to normal function.

Honduras ranks **49** out of **165** countries assessed for Lack of Resilience. Honduras is less resilient than 71% of countries assessed. This indicates that Honduras has medium susceptibility to negative impacts, and is more able to respond to and recover from a disruption to normal function.

Mexico ranks **82** out of **165** countries assessed for Lack of Resilience. Mexico is less resilient than 51% of countries assessed. This indicates that Mexico has medium susceptibility to negative impacts, and is more able to respond to and recover from a disruption to normal function.

Nicaragua ranks **64** out of **165** countries assessed for Lack of Resilience. Nicaragua is less resilient than 62% of countries assessed. This indicates that Nicaragua has medium susceptibility to negative impacts, and is more able to respond to and recover from a disruption to normal function.

Multi Hazard Risk Index:

The Multi Hazard Risk index assesses the likelihood of losses or disruptions to a country's normal function due to the interaction between exposure to multiple hazards (tropical cyclone winds, earthquake, flood and tsunami), socioeconomic vulnerability, and coping capacity

Multi-Hazard Exposure **Belize** ranks **89** out of **165** countries assessed for Multi Hazard Risk. Belize has a Multi Hazard Risk higher than 47% of countries assessed. This indicates that Belize has less likelihood of loss and/or disruption to normal function if exposed to a hazard.

Multi-Hazard Exposure **El Salvador** ranks **48** out of **165** countries assessed for Multi Hazard Risk. El Salvador has a Multi Hazard Risk higher than 71% of countries assessed. This indicates that El Salvador has more likelihood of loss and/or disruption to normal function if exposed to a hazard.

Multi-Hazard Exposure **Guatemala** ranks **28** out of **165** countries assessed for Multi Hazard Risk. Guatemala has a Multi Hazard Risk higher than 84% of countries assessed. This indicates that Guatemala has more likelihood of loss and/or disruption to normal function if exposed to a hazard.

Multi-Hazard Exposure **Honduras** ranks **40** out of **165** countries assessed for Multi Hazard Risk. Honduras has a Multi Hazard Risk higher than 76% of countries assessed. This indicates that Honduras has more likelihood of loss and/or disruption to normal function if exposed to a hazard.

Multi-Hazard Exposure **Mexico** ranks **53** out of **165** countries assessed for Multi Hazard Risk. Mexico has a Multi Hazard Risk higher than 68% of countries assessed. This indicates that Mexico has more likelihood of loss and/or disruption to normal function if exposed to a hazard.

Multi-Hazard Exposure **Nicaragua** ranks **66** out of **165** countries assessed for Multi Hazard Risk. Nicaragua has a Multi Hazard Risk higher than 60% of countries assessed. This indicates that Nicaragua has more likelihood of loss and/or disruption to normal function if exposed to a hazard.

Lack of Resilience Index:

The Lack of Resilience Index assesses the susceptibility to impact and the short-term inability to absorb, respond to, and recover from disruptions to a country's normal function.

Belize ranks 111 out of 165 countries assessed for Lack of Resilience. Belize is less resilient than 33% of countries assessed. This indicates that Belize has low susceptibility to negative impacts, and is less able to respond to and recover from a disruption to normal function.

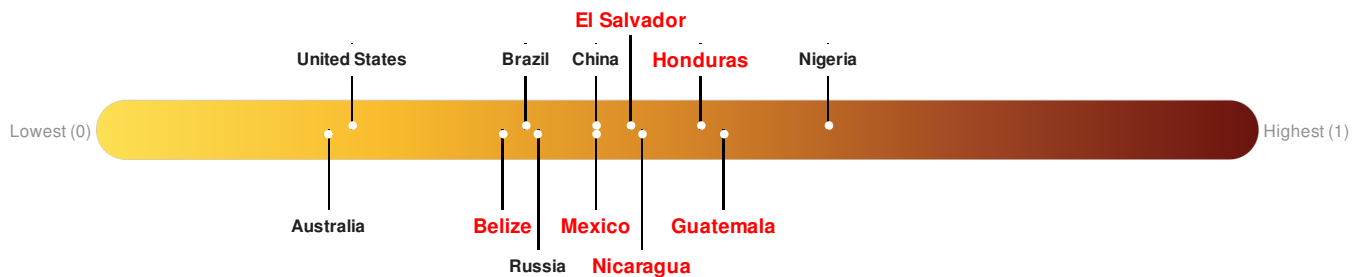

El Salvador ranks 64 out of 165 countries assessed for Lack of Resilience. El Salvador is less resilient than 62% of countries assessed. This indicates that El Salvador has medium susceptibility to negative impacts, and is more able to respond to and recover from a disruption to normal function.

Guatemala ranks 44 out of 165 countries assessed for Lack of Resilience. Guatemala is less resilient than 74% of countries assessed. This indicates that Guatemala has medium susceptibility to negative impacts, and is more able to respond to and recover from a disruption to normal function.

Honduras ranks 49 out of 165 countries assessed for Lack of Resilience. Honduras is less resilient than 71% of countries assessed. This indicates that Honduras has medium susceptibility to negative impacts, and is more able to respond to and recover from a disruption to normal function.

Mexico ranks 82 out of 165 countries assessed for Lack of Resilience. Mexico is less resilient than 51% of countries assessed. This indicates that Mexico has medium susceptibility to negative impacts, and is more able to respond to and recover from a disruption to normal function.

Nicaragua ranks 64 out of 165 countries assessed for Lack of Resilience. Nicaragua is less resilient than 62% of countries assessed. This indicates that Nicaragua has medium susceptibility to negative impacts, and is more able to respond to and recover from a disruption to normal function.
